First UK patients treated using the Intralase iFS

NEW LASER VISION TECHNOLOGY at Centre for Sight

The FIRST two UK and European patients have been treated with the new 5th Generation iFS Intralase laser with remarkable outcomes at 6/4.8 (20/15) vision on the first postoperative day. They both underwent IntraLASIK Zyoptix Wavefront with 10 second flaps and the new inverse side-cut.

"The flaps were barely visible and well tucked away under the reverse side cut" commented Mr Sheraz Daya, Medical Director, who conducted the procedure on March 31st 2009. He also added "these were the smoothest flaps I have seen and it is no surprise both patients had excellent quality vision on the first day! Additionally the reverse side-cut resulted in minimal if any postoperative discomfort."

For more information on the iFS 5th Generation Intralase - superior technology and for the moment no added cost - [CLICK HERE](#)

VISION CORRECTION AT ITS BEST

SARAH VAUGHAN IntraLASIK iFS with Zyoptix Wavefront

"I was so happy with the service I received from Centre for Sight. From the ladies in the office to the consultation, to the surgeon. Everybody here is so extremely helpful and I am more than 100% happy with my new eyes! Thank you Mr Daya."
