Army officer gains 20/20 vision through Implantable Contact Lenses

After 42 years of very poor sight, 11 tortuous years of thick glasses and 26 years of hard contact lenses, Captain Carmichael decided it was time for a radical change. Now post ICL surgery, his vision is 20/20 and his life transformed.

“My eyes have been subjected to the ultimate tests, 1 month living in the Belizian jungle and 2 months on operations in Afghanistan. I had no problems with the elements in jungle or desert surroundings, with the worry of loss of lenses totally eradicated, not to mention the 20/20 vision.”

ICL - approved by NICE

25th February 2009: The National Institute for Health and Clinical Excellence (NICE) issued full guidance to the NHS in England, Wales, Scotland and Northern Ireland on intraocular lens insertion for correction of refractive error, with preservation of the natural lens.

This means that, like their guidance on laser eye surgery back in March 2006, they officially consider Intraocular lens insertions, (such as Implantable Contact Lens ICL and Artisan performed at Centre for Sight for the last 7 years), safe and worthwhile procedures for those with higher prescriptions that may preclude them from conventional laser eye surgery.
