## First UK patients treated using the Intralase iFS

### NEW TECHNOLOGY at Centre for Sight

Yet another UK first = Centre for Sight in keeping with its leadership role has made considerable investment in the new iFS Intralase femtosecond laser. The installation is amongst the first two in Europe (the other in Germany).

The iFS has several **advantages** over the current 4th generation laser:

- **FASTER** - almost 3 times, flap creation is reduced from 30 seconds to less than 10 seconds, making the process quicker and safer with very short suction times on the eye.
- **PERSONALISED FLAPS** - Oval shaped flaps for those with astigmatism.
- **BIOMECHANICAL** - Reverse entry angle to maintain corneal and flap strength.

## VISION CORRECTION AT ITS BEST

### ABOUT CENTRE FOR SIGHT

*Centre for Sight, a pioneer and leader in laser eye surgery and surgical sight correction was established in 1996 by consultant ophthalmic surgeon Mr. Sheraz Daya.*

*An international authority on refractive and laser surgery; Centre for Sight was one of the first entrants into the laser vision correction market and continues to be a key leader and innovator. Centre for Sight offers its patients the safety and reassurance of being treated by an internationally recognised team of professionals, who offer a dramatically enhanced level of expertise and personalised care and treatment, from initial consultation right through to after-care assistance and reassurance.*

**LEADERSHIP ● EXPERIENCE ● EXPERTISE ● REPUTATION**
